Hardware List

The devices and drivers installed in your system are listed here. Details on the disk drives and monitor will also be shown if they are available. If a vendor name is not shown for a driver it usually indicates that the standard Windows driver is being used. In some cases, software will install drivers that are not directly related to hardware installed in the system, this is normal. (You can use Driver Alert to see if you have the latest driver.)

If a number is shown in the Code column, it means the device is not functioning normally. There may be an error with the device, or it may be disabled because it is simply not needed for the system to operate. An explanation of error codes can be found in Microsoft article 310123.
